This report scores the candidate retail site across six location intelligence variables using live data from OpenStreetMap, Google Places API, and Census of India 2011. Scores are weighted composites designed for franchise brand site selection in Gujarat.

Score Breakdown

Weighted composite score: 77.3 / 100 | Category: Restaurant

Demand Potential

weight: 20%

47.1

Census 2011 ward population estimate within 1km

Footfall Proxy

weight: 20%

100

Anchor stores within 500m — supermarkets, hospitals, schools, banks

Competition

weight: 20%

69.5

QSR competitor density within 500m, weighted by review count

Accessibility

weight: 15%

100

Road intersection density within 300m via OSM drive network

Catchment Quality

weight: 10%

100.0

Commercial activity density within 1km — cafes, shops, services

Spending Power

weight: 15%

60.0

Average Google Places price level within 1km as income proxy

Model note: Weights are initialised using domain logic (v1). After 20+ outlet performance data points are collected, weights will be recalibrated via regression to reflect brand-specific performance.

Demand Analysis

Demand score	47.1 / 100
Data source	Census of India 2011 — ward population estimates
Estimated population within 1km	94,176
Estimated households within 1km	18,832
Contributing wards	Navrangpura (Ahmedabad) Ambawadi (Ahmedabad) Naranpura (Ahmedabad)

Moderate demand — mixed residential and commercial zone. Footfall will depend more on anchors than residential density.

Footfall Analysis

Footfall score	100 / 100
Analysis radius	500 m
Anchor stores found	49
— Supermarket	2
— Hospital	20
— School	17
— Bank	9
— Subway Station	1

Strong anchor presence drives consistent footfall. Location benefits from multiple demand generators nearby.

Spending Power Analysis

Spending power score	60.0 / 100
Data source	Google Places price levels within 1km
Places sampled	5
Average price level	2.4 / 4.0
Budget places (level 0-1)	1
Moderate places (level 2)	1
Premium places (level 3-4)	3

Competitive Landscape

Competition score	69.5 / 100
Analysis radius	500 m
Competitor density	Moderate — mix of branded and local competitors (5-14)
Competitors found and weighted	4
Weighting method	Review count (70%) + Rating (30%) — branded = higher weight

Moderate competition. Established players exist but the market is not saturated. A well-positioned brand can capture real share

Competitor	Reviews	Rating	Strength
Foodie's Call	641	4.5	Strong
Queen's Pizzaa Queens Pizz	189	4.9	Strong
Burger Boom !!	88	5	Strong
Liberty fast food	13	4.8	Moderate

Accessibility & Catchment

Accessibility score	100 / 100
Road network analysis radius	300 m
Road intersections counted	42
Total road nodes in network	62
Catchment quality score	100.0 / 100
Commercial places within 1km	20
Data source	OpenStreetMap road network + Google Places API

Strong road connectivity. High intersection density indicates an arterial or commercial road — positive for visibility.

Final Recommendation

OVERALL SITE SCORE

77.3 / 100

Benchmark Comparison

Percentile rank	Better than 32% of similar sites
Benchmark average score	80.1
Top sites average	89.5
Reference sites in dataset	25

This site scores 77.3 — placing it in the below average among benchmarked restaurant locations in Ahmedabad (avg: 80.1,

Key Risk Flags

[OK] No significant risk flags detected at this location

Methodology Note

This report uses publicly available data from OpenStreetMap, Google Places API, and Census of India 2011. Scores are a weighted composite across six location intelligence variables. All scores are indicative and should be used alongside on-ground site visits and formal lease terms review. Model weights will be empirically calibrated against actual outlet performance data as client engagement progresses.
